

Samuel Ohrenberg

Software Engineer

405-919-8972 · samuelohrenberg@gmail.com · github.com/SamOhrenberg · AboutSamuel.com

SUMMARY

Full-stack software engineer with 10+ years across enterprise and public-sector systems. Cut student enrollment time from 24 hours to 5 minutes through end-to-end integration automation and cleared a 50+ ticket backlog to single digits as a sole technical owner within one quarter. Currently building with Azure OpenAI, pgvector RAG, and agentic AI patterns alongside a core stack of C#/.NET, SQL Server or PostgreSQL, JavaScript/TypeScript, and cloud-native infrastructure.

SKILLS

Languages: C#, JavaScript, TypeScript, Python, T-SQL, PowerShell, Java, Envision Basic

Backend: .NET 10, .NET 8, ASP.NET Core Web API, ASP.NET MVC, NestJS, FastAPI, Entity Framework Core, Dapper, Express.js, REST APIs, GraphQL, RabbitMQ

Frontend: React, Angular (13-19), Vue 3, Vite, Tailwind CSS, HTML, CSS

Cloud & AI: Azure OpenAI (GPT-4.1-mini, Embeddings), AWS (Bedrock, Amplify, Lambda, API Gateway, S3, DynamoDB), Azure (Functions, App Services, Entra, CosmosDB), Docker, GitHub Actions, LLM Integration, Agentic AI, RAG, Vector Embeddings, Prompt Engineering, GitHub Copilot, ECS/Fargate, GitLab CI

Data & Integration: SQL Server, PostgreSQL, MySQL, SQLAlchemy, UniData, ETL, SFTP, JWT, OAuth2, SAML, SSO

Practices & Tooling: Agile/Scrum, CI/CD, Git, GitHub (Repos, Projects, Issues, Actions), GitLab (Repos, Projects, Pipelines), Azure DevOps (Boards, Repos), LangGraph, xUnit, Moq, Postman, FERPA Compliance

CERTIFICATIONS

AWS Certified Cloud Practitioner

April 2025

Microsoft Azure Fundamentals (AZ-900)

April 2026

AWS Certified AI Practitioner

April 2026

EXPERIENCE

CampusWorks LLC

Apr 2025 – Present

ERP Software Engineer & Systems Consultant

- Inherited a 50+ ticket backlog from a multi-person predecessor team and resolved it to single digits as the sole technical focal point within the first quarter.
- Designed and deployed a proactive E2E monitoring framework using PowerShell, automated API calls, and Selenium-based browser validation to ensure service availability, reducing undetected outage windows from 12+ hours to minutes.
- Built Power BI dashboards surfacing system health trends from E2E monitoring data and user account security compliance from ERP data, enabling visibility into service availability patterns and ensuring accounts followed least-privilege access and were promptly disabled after termination.
- Delivered two major enterprise software upgrades stalled for 12+ months, Ellucian Self-Service 3.0 and the Colleague UI5-to-UI6 migration, hardening the institution's security posture and eliminating end-of-life platform risk.
- Established and conduct quarterly security audits of the Ellucian Colleague environment, evaluating controls across database, application, web, and infrastructure layers. First audit identified one critical and one high-severity finding with remediation plans developed and executed.
- Served as primary SQL Server and Colleague Administrator for a campus of ~15,000 students; received multiple formal commendations from the college CIO, including recognition to corporate CEO.
- Replaced a manual SQL-to-CSV process with a real-time PowerShell API integration synchronizing Ellucian Colleague with Moodle LMS, eliminating human error and recovering 40+ man-hours per semester.
- Collaborated with colleagues via Azure Repos to develop, version, and reuse PowerShell automation scripts across multiple client engagements, improving consistency and reducing redundant scripting work.

Lost Rabbit Labs, Inc.

Mar 2025 – Present

Consultant & Lead Developer (Contract, Part-Time)

- Rebuilt a multi-tenant SaaS security scanning platform as sole developer, consolidating a fragmented micro-API prototype into a Python/FastAPI + React/TypeScript monorepo backed by PostgreSQL.

- Designed a LangGraph-based scan orchestrator that coordinates distributed worker types over RabbitMQ, with PostgreSQL checkpointing for crash recovery.
- Built queue-driven autoscaling of containerized workers on AWS ECS Fargate, deployed through GitLab CI/CD pipelines with SAST and secret detection.
- Implemented tenant isolation and access control (JWT, Argon2, API keys, role management, owner-scoped queries) and a custom query language for searching scan results.
-

The Ninety-Nines, Inc.

Jan 2020 – Present

Volunteer Web Developer

- Sole developer of a full-stack annual meeting credentialing application built on Angular (maintained and upgraded from version 13 through 19), ASP.NET Core Web API, Entity Framework Core, and MySQL, hosted on Linux/Apache2 with GitHub Actions CI/CD.
- Implemented secure Magic-Link authentication via the Brevo API for transactional email delivery, replacing an unauthenticated email-trust model.

Oklahoma City Community College

Dec 2019 – Apr 2025

Enterprise Systems Programmer → Senior Software Engineer → Director of ERP Data

- Progressed from Enterprise Systems Programmer (2019–2023) to Senior Software Engineer (2023–2024) to Director of ERP Data (2024–2025), each transition driven by demonstrated impact and institutional knowledge.
- Diagnosed and resolved a multi-year miscalculation in the Oklahoma Teacher Retirement System data transfer program, eliminating the manual per-paycheck corrections HR had been performing for every affected employee.
- Maintained critical compliance reporting systems including 1098T distributions and state/federal regulatory submissions, ensuring uninterrupted student funding and adherence to FERPA requirements.
- Spearheaded department-wide adoption of Git-based source control, GitHub Actions CI/CD with self-hosted runners, Agile/ClickUp sprint management, and formal code review processes, establishing the first structured DevOps culture in the department.
- Pushed for and implemented Github Copilot to enable rapid development by a small development team to maximize agility and development speed.
- Sole developer of a synchronization layer between Outcomes CRM and Ellucian Colleague ERP, automating student onboarding end-to-end and reducing enrollment wait time from 24 hours to under 5 minutes with full fail-state recovery via SQL Server persistence.
- Evaluated Azure Functions for a serverless microservice API approach on the Ellucian Experience integration; selected a traditional ASP.NET Core Web API instead for cost efficiency and to maximize use of existing infrastructure capex.
- Architected an ASP.NET Core 6 Web API as the data layer for the Ellucian Experience cloud portal, enabling custom React components to safely consume legacy ERP and SQL Server data via signed JWTs, deployed via GitHub Actions CI/CD with gated deployments. Improved data accessibility for 15,000+ students and staff.
- Additional projects: Budget Entry Portal (ASP.NET MVC, 100% adoption, zero escalations), Oklahoma State UDS Reporting Refactor, enterprise GitHub implementation with SSO/SAML and enforced CI/CD, and 10 interim C# ETL pipelines maintaining zero-downtime vendor transfers during platform migration.

Apex Systems (Contract) – Dell Technologies

Aug 2024 – Feb 2025

Contract Applications Developer

- Developed a Python-based automated auditing system using local LLMs (LM Studio) to cross-reference telephony call transcripts against service desk ticket records, achieving 99% accuracy in call-to-ticket matching and identifying previously untracked billable work.
- Built and maintained PowerBI dashboards providing real-time and drill-down operational metrics for leadership.
- Maintained a polyglot Express.js/Java/Angular monolith used for service desk reporting.

Dell Technologies

Jul 2018 – Dec 2019

Software Engineer

- Architected a C# automation engine eliminating 50MB daily Excel extracts and thousands of man-hours of manual data manipulation, generating over \$200,000 in annual cost savings.
- Reduced department-wide average handle time from 17 to 15 minutes (12% capacity gain) via a real-time WinForms AHT tracking tool supporting 100+ concurrent agents.

PERSONAL PROJECTS

AboutSamuel.com

2025 – Present

- AI-powered portfolio featuring SamuelLM, a chatbot built on Azure OpenAI (GPT-4.1-mini) with a full RAG pipeline using pgvector cosine similarity search on PostgreSQL for semantic retrieval. Includes a Skill Map visualizer, an interactive 2D scatter plot where visitors can query and explore 1536-dimensional embeddings across all portfolio data projected via UMAP, with tap-to-explore, chained semantic search, and a mobile-optimized pinch-to-zoom UI.
- Stack: Vue 3/TypeScript, ASP.NET Core 8, PostgreSQL + pgvector, Azure OpenAI, Railway (containerized, auto-deploy from GitHub), EF Core 8, Serilog + Axiom observability.

Regulation Podcast Transcription Database

2024

- Automated ML transcription pipeline using Faster-Whisper and FFmpeg to transcribe, index, and publish hundreds of hours of podcast content to a searchable Vue.js frontend, deployed via GitHub Pages.

EDUCATION

Oklahoma State University Institute of Technology

Jan 2018 – Dec 2020

Bachelor of Technology in Information Technology, Software Development Focus · GPA 3.61 · Magna Cum Laude
